The Foot -Measurement:

The Digitizer is the first and most proven and recognized foot measuring device for insoles and footbeds. The foot is scanned mechanically in three dimensions with over 500 measuring pins, and the measurement is therefore unaffected by light, dust or other interfering factors. The image resolution is 464,616 pixels. Plaster casts, lasts and worn insoles (as negatives) can also be scanned. The Digitizer is available as a stationary and mobile version and can be easily integrated into a measuring platform.
